

PROJECT INSTALLATION SPECIFICATIONS

Installation:

At Your Service Windows & Doors will install the new Hurricane Rated units into bucked and waterproofed openings per Florida Building Codes and Product NOA or Approval Drawings. All fasteners and anchor types to be per product approval of special engineered drawings. Installation includes proper functioning of operable windows, doors, factory multipoint lock systems and hardware.

Bucking:

We supply and install pressure treated 1x or 2x bucking for all windows and door openings. Bucking will be installed per bucking detail with 1/4" DIA Ultra con Tap cons or similar approved materials per the approved manufacturer anchor types, locations and spacing.

Waterproofing:

All masonry openings to be waterproofed with a monolithic waterproofing membrane directly to the concrete to envelope the opening with an 12" perimeter, per ASTM 331 and ASTM 547 standards. Window and door openings to be sealed with a textured single components, moisture curing gun grade polyurethane sealant. Vulkem 116 is a durable flexible sealant designed for use on poured and precast concrete, masonry works, window and doors perimeters, and similar construction joints. ASTM C920
